

A single planning system for your retail challenges

THE CHALLENGE

WORKFORCE SOLUTION

Plans for the right people with the right skills, at the right store, at the right time.

Considers store sizes, congestion, footfall and sales volume to support decision-making.

Takes into account full and part-time employment contracts, labor policies and union rules to come up with optimal plans.

Plans go into details like store formats and layout to assign the right people at the right location.

Forecasting of hours and employees for each store supports planning for workers, shifts and locations.

Integrates with existing systems to easily pull information such as sales data from other systems within the business.

Supports business growth and operational changes with what-if scenario analysis.

BUSINESS GOALS & FUTURE PLANNING

LOGISTICS SOLUTION

Visibility up to 48 hours ahead to better prepare for day of operations' shipments.

Creates plans with types of trucks, drivers and goods, as well as delivery hours in mind.

Multiple-temperature planning takes into account pallet, temperature zones and limited cooling devices.

Loads are optimized for multi-temperature compartments (dry, refrigerated and frozen goods).

Plans routes and assigns tasks, taking into account specific delivery times and maximum hours of work allowed for drivers.

Interfaces with the transportation messaging system to facilitate flow of information between planners and drivers.

Multi-level planning capabilities for more accurate forecasts of size and number of trucks required.
